

HOW MESSAGENET CONNECTIONS WORKS

MessageNet Connections is an integrated system that unifies safety and security systems with everyday and emergency communications systems using the technologies you already have to form a powerful system that leverages the spectrum of devices found in the enterprise.

Private Communications Devices

Computer Pop-Ups
pop-up messages scroll on the screens of network PCs.

Telephones
supports desk/cell phones, voice-mail, auto dial directory, and SMS texting. Messages can be received by phone.

E-Mail
messages can be sent from Connections to any internal or external user.

Text Messaging & Paging
supports commercial, in-house, and two-way pagers as well as PDA's. Pager voice-mail and customizable paging applications available. Support for Vocera badges, RSS and Twitter.

Panic Buttons & Detectors
supports a variety of wireless duress/panic buttons, door and window open detectors, and smoke/motion detectors. Also supports wireless IP cameras and interfaces to fire and alarm systems.

Two Way Radios
messages can be delivered on your two way radio.

Public Communications Devices

Video Cameras & Surveillance
Real-time, event-driven, live and recorded video, including user-initiated surveillance and video conferencing.

PA Systems, VoIP and Analog
a front end that provides new intercom features such as text-to-intercom, log-on controls, message scheduling, and logging. Multiple PA systems controlled at one time.

Fire Panel Integration
integrates with industry-standard fire panels to receive and process real-time information and send messages accordingly.

LCD and Digital Signage
an integrated multimedia communication alert panel with the capability to deliver web content, Power Points, and audio and visual messaging. Evacuation routes. Can also schedule and deliver locally stored video content and broadcast TV content.

PoE Audio-Visual and LED signs
displays alerts and messages with scrolling text, flashing lights, and audio PA.

LED Electronic Signs
provides organization-wide outdoor and indoor visual PA features. Can support thousands of electronic signs on your LAN and WAN.
